

How it works

5 Steps to crowdsourced testing

1. Project Set-up

- We assign a dedicated Test Lead to your project
- Discuss your business needs and goals with you
- Define your testing scope, requirements and test cases jointly, and develop work instructions for testers

2. Launch Test Cycle

- We coordinate the test environment, test data and secure access with you
- Launch the test cycle to thousands of suitable testers across the world
- 25 to 250 professional testers start work within a few hours

3. Managing & Monitoring Test Execution

- We closely manage the test coverage of your functional and device requirements
- Guide and supervise the testing team
- Provide you with regular progress updates and real time visibility through the online portal

4. Review & Validate Defects

- Our Test Lead reviews every defect and test result
- Recreates all reported issues
- Removes duplicates and invalid defects

5. Fast Results

- Our Test Lead prepares your final reports
- Online access and walk-through of deliverables
- In-depth testing completed in 2 to 5 days
